

A baseball player in a black and white uniform is sliding headfirst into a base, creating a large cloud of orange-brown dust. Above the player, a stylized green umbrella logo is positioned over the word 'BASE'. The background is a bright, hazy sky.

WATER-RESISTANT, WITH WEARGUARD

BASE DEFENSE SYSTEM

Green Umbrella Base Defense System™ is a basic entry-level, complete system for interior architectural concrete floors to be abrasively processed @MatureAge™. Starting with a wet process and a liquid surface refinement cutting agent, GreenCut™. Profile with the use of power trowels or grinders. Various GC abrasives of BigStock™, GC-X™, GC-Fusion™, GC Eraser™, and GC PolishPlus™ play ball with any specified class of profile or gloss. Base Defense™ first covers the field with DryShield, our highly abrasion-resistant flagship densifier that fills the concrete voids—than bringing a home run finish with the Interior Microfilm™. This repairable wear-guard brings clarity to the profile. Finally, Base Defense promotes bonding and cross-linking within the concrete without the negative side-effect of ASR or topical de-lamination. Next, use GreenClean™ a Lifecycle™, a maintenance cleaner with a densifier built creates a daily defense for the floor. All of this to cover the bases.

GreenCut™ is a *Neutral Nano Surface Profile Agent*. Used in applications where conventional laborious processing was specified but where a more refined surface and reduction in product treatment is desired.

DryShield™ is a *Penetrating Completely Reactive Hydrophilic Insoluble Nano Densifier* for interior or exterior. Green Umbrella's our flagship cross-over densifier DryShield for use in applications where a high-abrasion resistant and value-engineered treatment is needed.

Interior Microfilm™ is a *Penetrating Reactive Interior Microfinish for Profiled Surfaces* for interior surfaces only. Used in applications where basic stain guards are specified but where a more permeant, reactive, and high-performance treatment is desired.
