Floor Innovation

An innovation in work safety as well as maintenance is being implemented to provide a new level of sustainability. Fire Station 99 on the Muckleshoot Indian Reservation uses permanent caution striping on the concrete that is more durable and more vibrant than tradition paint.

After the floor was mechanically ground using Green Umbrella™ GreenCut, vibrant yellow caution striping was introduced uniquely to the substrate.

Green Umbrella™ prides itself in our environmentally friendly process.

A Beautiful Shield

Paint can flake, attract dirt, and needs to be redone often to be maintain its appearance.

Using Green Umbrella™ Colorshield, the lines become part of the either indoor or outdoor floor. Because the color lies deep in the floor and not just a layer on the surface, it will not flake, grow dull, or attract dust and dirt.

Applying the same technique, floors can have colored walkways, lines, multiple colors with clean lines without paint or new construction. Be it for safety or decor, Colorshield adds to the Green Umbrella™ standard of creating more efficient, environmentally friendly, and sustainable flooring.
