COLOR FUSION

HARDENER:

COLOR SHIELD

Green Umbrella Color Shield™ is a concrete hardening product that colors the floor as it penetrates. Quick installation with a wide color range makes this the right product for your concrete floors. Green Umbrella Color Shield™ provides UV stable color, a glossy sheen, and can be used both inside and outside while beautifying concrete without several abrasive polishing steps. Simply apply Green Umbrella Color Shield™ and burnish. Green

Umbrella Color Shield™ eliminates the need for acid stains, neutralizers and other hazardous waste disposal issues which significantly reduces your impact on the environment.

PENETRATING TREATMENT:

MICROFILM

The added protection that makes you shine. Green Umbrella Microfilm™ is an environmentally friendly hybrid surface treatment that creates a durable micro-thin layer to protect concrete. After burnishing Green Umbrella Color Shield™ apply Green Umbrella Microfilm™ which forms a breathable, dense protective layer that is highly resistant to oils, stands up to acid and chemical exposure, and is not prone to whitening, peeling or flaking while adding a beautiful high-gloss finish. Superior chemical resistance to some of the harshest chemistries a facility floor will face. In case of concrete etching Green Umbrella Microfilm™ provides a repairable layer to the Color Fusion system.
