CURE SYSTEM

Green Umbrella GreenIce Cure™ System is an interior or exterior *@EarlyAge™* integral concrete cure. This two-part system utilizes a cure, *IceStart™*, during finishing and a fixative, *IceStop™*, immediately after troweling. The GreenIce Cure System creates an unconventional, consolidated and refined surface that promotes best concrete practice, improving edges and ff/fl numbers. *@Finishing™* it works as a finishing aide—yet provides a cured, mechanical-

ly and chemically densified floor with a polished concrete look, all at day of placement—cutting construction downtime considerably. The GreenIce Cure System brings hardness, density, abrasion resistance, moderate stain resistance while retaining the maximum amount of moisture within the concrete during curing for an unconventional architectural concrete floor where sustainability is @.

USED *@EARLYAGE* STAGING GREENICE CURE SYSTEM REDUCES MOBILIZATIONS BY REMOVING THE NEED FOR MONITORING WATER CURE, CHEMICAL CURE APPLICATIONS, CHEMICAL CURE REMOVAL, AND THE NEED FOR CONCRETE DENSIFIERS AND HARDENERS.

IceStart™ is a *Surface Applied SCM (Supplementary Cementitious Material) Admixture* that is the first treatment of a *Two-part Surface Applied Admixture Cure and Densification System*, called *GreenIce Cure System™* with *GUnanolSide* technology— that is designed for Interior or Exterior concrete. Used only *@EarlyAge* concrete staging, it is a chemical and mechanical process applied at time of concrete placement and power troweling.

IceStop™ is a *Hydrophobic Fixative for Surface Applied Admixture Cure* that is the second treatment of a *Two-part Surface Applied Admixture Cure and Densification System*, *GreenIce Cure™*, with *GUnanolSide* technology— that is designed for Interior, or Exterior concrete—applied after the power trowel concrete finishing is complete. *IceStop* cross-links to *IceStart* cure to form benefits conventionally seen only in high-performance polished concrete floors.
