

TOPICAL / PENETRATING-REACTIVE / WET-GLOSS

GREEN UMBRELLA® EXTERIOR MICROFILM

EASY TO APPLY, QUICK TO CURE, SIMPLE TO MAINTAIN

Green Umbrella® Exterior MicroFilm™ is designed to seal and protect decorative surfaces with an intense wet-gloss finish that preserves integral and pigmented colors. As a stain-guard, it is resistant to graffiti, oil, and other harmful surface contaminants. Exterior MicroFilm is a subtopical, penetrating treatment that forms a breathable and dense wear-guard surface that will not peel and does not require stripping for reapplication. It enhances and protects exposed decorative concrete, stone, and masonry surfaces, even in aggressive environments. The treatment produces a clean, attractive, durable surface that extends concrete's lifecycle and is easy to clean and maintain.

CUT LABOR

- Reduced maintenance
- Fewer applications needed
- Easy to apply

CUT DOWNTIME

- Quick curing
- Protects the floor for the duration of the project
- Callbacks are eliminated because there is no flaking

CUT ENVIRONMENTAL IMPACT

- A longer lifecycle minimizes material use and waste
- Repair the surface without stripping or removing the previous sealer
- Low VOC improves air quality in the work area

VERSATILE ARCHITECTURAL APPLICATIONS

Whether vertical or horizontal, use this **exterior** Green Umbrella® product in:

- Demanding applications where outdoor honed concrete and outdoor decorative concrete are used in driveways, patios, parking decks, garages, and other areas where concrete surfaces are maintained

EASY TO INSTALL - SIMPLE TO MAINTAIN

Green Umbrella® Exterior MicroFilm™ is shipped R.T.U.™ (Ready-to-Use). Easily apply S.O.L.O.™ (Spray-On, Leave-On) with a GU-recommended sprayer for coverage of 400 to 600 SF per gallon. In some applications, spread with GU exploded tip broom or T-bar. To maintain, simply damp mop, auto scrub, and periodically burnish using Green Umbrella LifeCycle™ maintenance system treatments.
