

**GREEN UMBRELLA™**

**Polylock**

cut. fill. shave.

Green Umbrella PolyLock™ solves the problem of edge disbondment frequently experienced when placing new joint filling materials. The joint filler application is designed to contribute a clean, aesthetically pleasing floor. The edge protective function of joint filler/sealant allows for early application and minimizes the need to repair and refill separated joints.

#### Features & Benefits

Rapid curing formula

Self leveling

85% elongation

Overfilled joints are shaveable in 45 Minutes

No V.O.C.s

Wide temperature range of usage/application

Keeps joints free of debris

Recommended Usage

Allows for heavy traffic in just 90 min

Quick filling of joints or cracks

Allows for expansion & contraction of concrete

No wasted time waiting around on the job

Low odor and environmental/regulatory compliant

Used in multiple environments

Safe work environment

#### Technical Info:

Gel Time: 3 min

Cure Time: 90 min

Bond Strength: 400

Abrasion Resistance: Excellent

Green Umbrella products are safer for the environment, and a responsible alternative for professionals concerned about the ecological impact of densifiers and other polished concrete treatments. Unlike most traditional floor treatments, Green Umbrella products have a very low VOC content, minimal impact on indoor air quality, and create an ultra-hard surface that reduces maintenance frequency while significantly extending the life of concrete and masonry.
