The **Green Umbrella Base Defense Treatment System™**, is the basic treatment system for any Ground Honed Polished (GHP) floor. It starts with **Green Umbrella Dry Shield™** which hardens the floor with environmentally designed, pH neutral chemistry that does not require the labor of multiple applications. Coupled with, penetrating **Green Umbrella Microfilm™** that provides resistance against etching and protects from common contaminants. **Green Umbrella Microfilm™** is also breathable and has non-resinous polymers, meaning you are not simply applying a wax coating that would require being heated up to a given temperature, as is common with some other concrete products. Cut your Labor, Cut your Downtime and Cut your Environmental Impact with the **Green Umbrella Base Defense Treatment System™**.

Compatible with  
**GREEN UMBRELLA™**  
 Polished  
**Concrete Dye**
