The **Green Umbrella HybridCut Treatment System™** is a superior system for a GHP (Ground Honed Polished) concrete floor. Centered around **Green Umbrella GreenCut™**, and coupled with **Green Umbrella Shield & Enhance™** and **Green Umbrella Microfilm™**, this simply is the tightest, highest gloss and most resilient floor system of non-resinous polymers on the market. The result of **Green Umbrella HybridCut Treatment System™** is a floor that looks more like marble or stone than concrete. This Treatment System greatly reduces labor and downtime while at the same time increasing concrete surface density and tightening the porosity. This Treatment System provides the integrity of the mechanical floor process and achieves it in less time. Using the Green Umbrella proprietary hybrid cutting agent **Green Umbrella GreenCut™** and including **Green Umbrella Shield & Enhance™** for high water repellency and a chloride screen, then finishing with a layer of protection from the breathable **Green Umbrella Microfilm™** provides a floor that in all phases will Cut Your Labor, Downtime and Environmental Impact. You cannot create a better GHP floor than we provide with the HybridCut!
