A good team is a team whose strengths complement one another, a good team plays well together. It is important that chemistry applied to concrete follows the same principle. Concrete treatments that complement one another; coupled with the proper mechanically ground, honed, and polished floor can create a winning combination for your polished concrete needs. **The Green Umbrella Max Defense Treatment System™** is made up of three key players: **Green Umbrella Dry Shield™** has one of the highest abrasion resistance levels on the market. **Green Umbrella Shield & Enhance™** has a superior chloride screen. To finish off the lineup **Green Umbrella Microfilm™** offers a repairable surface layer making **Green Umbrella Max Defense Treatment System™** a team that has you covered.

Reference – ASTM D-1308

Testing was completed on 1 cubic inch concrete samples that had been treated with a three-part protocol using Dry Shield, Shield and Enhance and Microfilm (or RTU Microfilm). Each cube was completely immersed in the respective chemicals for 48 hours. No visually perceptible changes occurred in any sample surface texture or appearance (color). Chemical Resistance to:

JP-8+100 fuel	●	0.1%	weight gain
30wt Motor Oil	●	0.007%	weight gain
Skydrol 500 B-4	●	0.05%	weight gain

Compatible with
